If you are in the business of educating, you know how difficult this job can be. These days, interactive lessons that can be viewed over the Internet or from a CD are all the rage. There are many programs that can be used to capture a computers screen, mouse action and audio. Unfortunately, the resulting movies can be hugea five minute lesson could easily gobble up nearly 100mb of storage space on a hard drive. Downloading a file that large will take a lot of time, even if a user has a fast Internet connection. Large file sizes are just part of the problem. The movies may not be crossplatform they may not work on both Macs and PCs. And there are few of these programs that allow images to be imported. This fastpaced workbook will teach you the essential skills you will need to use Captivate to develop highly interactive eLearning courses.Then you can start reading Kindle books on your smartphone, tablet, or computer no Kindle device required. Register a free business account He has written more than 100 stepbystep computer training books, including Essentials of Adobe Captivate 4, Adobe Captivate 4 Beyond the Essentials, Essentials of Adobe Captivate 3, Essentials of Adobe Captivate 2, Essentials of Macromedia Captivate, Essentials of RoboDemo 5, Essentials of Adobe RoboHelp 8, Essentials of Adobe RoboHelp 7, Essentials of Adobe Dreamweaver CS3, QuarkXPress 8 The Basics, Essentials of Adobe InDesign CS3, Camtasia Studio 7 The Essentials and Camtasia Studio 6 The Essentials. Kevin spent five years in the U.S. Coast Guard as an awardwinning photojournalist and has more than two decades experience as a print publisher, technical writer, instructional designer and eLearning developer. He is a certified technical trainer, has been a classroom instructor for more than 18 years and is a frequent speaker at trade shows and conventions. Kevin holds multiple certifications from companies such as Adobe and the CompTIA.

If you are a seller for this product, would you like to suggest updates through seller support To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later.I was trying to learnbydoing on my own and was feeling overwhelmed. This book was able to get me up and running after two days of working through the stepbystep lessons. Previous reviews have mentioned that the book seems cheaply produced, which is true, but the black and white screenshots are clear and easy to read, so I have no complaints. I bought this book used for a few bucks and am quite satisfied.When this book arrived I was greatly dissapointed to see that it was very cheaply produced and the images which were mostly very poor quality black and white screen shots. Although it was neccessary to download files to work with for training, the style of training was very low level and really didnt give you a good reason why you are doing these actions.just do them to accomplish this action. Like I said, very low level training that made me not even want to open the downloaded working files to work on uninteresting projects. For the high price of this book you would expect more from it and not something that looks copied from a zerox with not a lot of information or explaination of why or when to do things. I found that Adobes free online Captivate training videos to be more useful and informative than anything this book could offer. I learn better knowing when and why to use certain features and what certain menu items mean.not just following along and when you want answers to why you would do it that way the book really tells you zip. I know that this is suppose to be an elemental book to learn Captivate, but it really is lacking in the info department.

Im glad finding out about this before order the second more advanced book that looks like the same high priced, low budget style.My company purchased this in hopes that we would be able to give this to other users to help manuever throughout Captivate. However, not everyone in our facility has the ability to download the appropriate materials for security reasons. We were also hoping for something slightly more abstract. We had taken a class on Captivate and went through all of this

material; however, we were looking for something that would allow us to do more than what we had learned in class and apply it to the projects we are working on. This did not do that. If you simply purchase Captivate 5 or 5.5 without training, this book may be more helpful to you. If you have had ANY kind of training in Captivate, though, I would not recommend this at all. We have looked high and low for materials to meet our needs to no avail. There are only blogs about Captivate and the occassional YouTube video to assist with anything further than the basic skills. Thoroughly disappointed.We have been using this for over a year. Thanks ICONLOGIC.I look forward to learning more.This is for new and advance users. Content developers will love the practical views and insight that Kevin has on Captivate.In three days, I feel comfortable using Capivate 5.I knew nothing about Captivate when I opened it and by the time I finished at the end of the day I was able to publish my first course. I highly recommend this book to anyone that learns best by doing. The step by step instructions were perfect for the way I learn and I look forward to diving into the advanced Captivate book. Adobe Systems Incorporated, 345 Park Avenue, San Jose, CA 951102704, USA. For U.S. Government End Users, Adobe agrees to comply with all applicable. No personal data is transmitted. A singleuser retail license activation supports two computers. For example, you can install the product on a desktop computer at work and on a laptop computer at home. Both Adobe Captivate on Mac and Adobe Captivate on Windows have identical features and homogeneous user interface.Adobe Photoshop can be invoked from within Adobe Captivate. If source files are directly updated in Adobe Photoshop, synchronize the linked file in Adobe Captivate with its source using a single click. A specific arrangement of these elements is called a Workspace. Adobe Captivate provides preset workspaces that help you get started quickly. You can also customize the workspace by arranging the elements in a way that suits your requirements. Main Options Shortcuts for adding Adobe Captivate objects, such as, text captions, buttons, and highlight boxes. Object Toolbar Using this toolbar you can also draw objects, such as, lines and rectangles, and also set the stroke and fill colors. Displays a thumbnail view of the slides in the project in the order of their appearance. For more information, Filmstrip see "Filmstrip". If a slide has a label short title assigned, the label appears under the slide. It might be easier to move slides and jump to a specific slide if you have assigned labels instead of just using the slide number. Rearrange the Timeline panel By default, the Timeline panel is docked at the bottom of any slide in an Adobe Captivate project. You can move,

resize, group, or dock the Timeline panel to suit your requirement. A slidelet has its own Timeline. All the objects in the slidelet are displayed in its Timeline. When you select a slidelet, the Timeline changes automatically to that for the slidelet. To display the Timeline for the slide containing the slidelet, click anywhere outside the slidelet.

You can export the Branching view of an existing Adobe Captivate project into a BMP, JPEG, or JPG file. Combines the selected slides into a single group. For more information on grouping slides, see Create Slide Group Displays all the slides belonging to the selected group. However, you can also import them into the library and use them when needed. By default, the Library panel is displayed in all the preset workspaces of Adobe Captivate.If you drag to an area that is not a drop zone, the panel floats freely in the workspace. The smaller the value, the smaller is the gap between the dots in the grid. Shortcut keys Shortcut keys provide an easier and quicker way to navigate and use Adobe Captivate. They let you use keyboard key combinations instead of a mouse or program menu. The common shortcut keys are listed in the table. In the Preferences dialog box, select Keys from the Recording menu. To change keys, click once in one of the text boxes and, on the keyboard, press the key or key combination you want to use. For example, F1 is frequently used as a keyboard shortcut to display Help. Start creating an Adobe Captivate project using one of the following options on the Welcome screen Choose a predefined template for your project. The following modes of recording are available. Adobe Captivate captures screenshots automatically and places them in separate slides. For. Resize the handles of the box Crop to select the area that you want displayed on the slide. If you selected Constrain Proportions, Adobe Captivate maintains the heighttowidth ratio of the bounding box. In addition to placeholders, you can add all Adobe Captivate objects and supported media to templates. The template serves as guidance only. Users can change the objects and placeholders without any restriction when creating a project from the template. When you resave the project, the changes are saved to the backup file too. The backup file is saved with a.bak extension.

In the Preferences dialog box, select General Settings from the Global menu. A click box is an object in Adobe Captivate that designates an area around the place where the mouse was Click Boxes clicked during recording. None of the Adobe Captivate objects are added by default during recording in the Custom mode. You know that full motion recording has begun by looking at the Adobe Captivate icon in the system tray lowerright corner of your computer screen. When you are recording normally, the icon appears as a regular icon. When full motion recording automatically begins, the icon flashes. For more information on customizing recording preferences, see "Set recording preferences" on page 33 Click the Record In Selected Mode button. Pause while recording projects You can pause while recording an Adobe Captivate project. Any action performed after a project is paused is not recorded. Set recording preferences Adobe Captivate uses a default set of preferences for panning and other settings when recording or creating projects. You can customize these preferences using the various options available in the Preferences dialog box. You can also set options to optimize the size of the FMR SWF file and set the color mode for the SWF file. In the Preferences dialog box, select FMR from the Recording menu. The reason for disabling the options is based on the logic for recording in that mode. However, you can still enable some of the options if you have a special requirement. In fact, after you have set your preferences and completed your recording, you will probably work nearly exclusively at the slide level until you are ready to preview and publish your project. Though a project can have multiple master slides, you can link a slide to only one master slide. That is, you cannot edit the properties of master slide objects on the slide that inherits the master slide. Send Email To Adobe Captivate runs the specified JavaScript.

Execute JavaScript Adobe Captivate runs the script written using the application. Execute Advanced Actions When the user performs the required action, the specified hidden object is made visible Show When the user performs the required action, the specified object is hidden from the user. In

this case, you probably dont want to rerecord the entire project but just a few actions. You can edit and work with the new slides just like the original slides. Insert blank slides In an open project, rightclick Windows or Controlclick Mac OS the slide after which you want the new blank slide or slides to appear. The default setting is 30 Flash frames per second and is appropriate in most cases. You may need to change the rate if you are embedding your Adobe Captivate SWF file in another SWF file that has a frame rate different than 30. When you lock a slide, all objects on the slide can be viewed but not edited. This feature is useful if you want to send your project to others for review but do not want them to make changes to objects. By expanding and collapsing groups, you can view subsets of the slides instead of all slides at once. Groups also provide a useful overview for the project, and they provide a convenient way of deleting or hiding multiple slides at once for example, slides that you don't want to. You can also convert slide notes to closed captioned text. Unlike slide notes, closed captioned text appears on the slide during runtime. You must register the Adobe DLL to fix this error. You can add existing sound files or record your own voiceover. You can include a welcome message or play some appropriate music. Adobe Captivate has many different types of objects. Types of objects Adobe Captivate provides various objects that you can use to enhance the usability and interactivity of your Adobe Captivate project. Specifying default object styles for the current project Open the project for which you want to specify the default object styles.

For more information, see Showing and hiding the Effects panel Go to Windows menu, and then click Effects. Creating custom effects in Adobe Flash You can save the classic tweens as XML files in Flash and then use the effects in Adobe Captivate.To do so, open the XML file in a browser or an XML editor. You can reuse them as many times as you want. Note After you open the Library of another Adobe Captivate project, that project stays in the Open Library menu. You can quickly access that project Library at any time. Note To reuse media objects from another Adobe Captivate project, open that project Library from within your current project Library. Then drag objects directly onto a slide or into the current project Library for easy reuse. This is an easy way to create precise and professionallooking project slides. You have many options for aligning objects both vertically and horizontally. Some of the alignment options depend upon the location of the anchor object. The grid lets you more accurately place and position objects on a slide. You specify the order in which objects appear. Use the Timeline to precisely adjust the timing of all objects on a slide. For example, suppose you import a large image into a slide that contains other objects. You can merge the image into the slide so that it becomes a static background for the other objects. If you select Include In Quiz this option, Adobe Captivate adds the score from the object to the overall score. Selecting this option selects the Include In Quiz option in the Reporting area of the Properties inspector. The only way in which you can add plain text to a slide in Adobe Captivate is using transparent text Add text to a slide captions. Each text caption type is named, and a small Caption Type thumbnail image shows what the text caption looks like. Note When adding or modifying a text caption, select the caption type before setting the style and format of text in a caption.

For example, if you record the action of selecting the File menu, Adobe Captivate can automatically add a text caption that reads "Select File menu" on the same slide. If you edit the text, the caption is resized to accommodate the altered text. This is an easy way to keep your text captions looking balanced and proportional. In the Generate Captions In, select the added language. Change the location if you want. All the text caption BMP and corresponding FCM files are located in this folder. Rightclick Windows or Controlclick Mac OS the FCM file you want to edit, and select Open With. First, you export the text captions from your Adobe Captivate project. Adobe Captivate creates a DOC file that preserves all the formatting from the text captions. While the text captions are in DOC format, you can make text and formatting changes in a wordprocessing program. In the Category panel, select Modes under the Recording menu. When this option is selected, Adobe Captivate creates a rollover caption for every tooltip that is selected during the recording process. Highlight boxes focus the user's attention on the required areas of the slide.Adobe Captivate includes two

effects you can Custom use. Test them by clicking the popup menu, selecting one, and then clicking Play. View the effect in the small preview window on the right. In the Category panel, expand Project, and select Publish Settings. In this case, it is difficult to manually position the pointer correctly. Adobe Captivate can solve the problem by automatically aligning the pointer to the same position as the previous or next slide in the project. You can insert and display objects in the slidelet using the same procedure as that for the slides. You can use this name when defining the visibility conditions for the Item Name object. For example, F1 is frequently used as a keyboard shortcut to display Help on Windows.Zoom areas Zoom areas help you draw the learner's attention to important sections of a slide.

By default, the gallery is stored in the following location when you install Adobe Captivate C\Program. Update PSD files If the files in the Adobe Captivate library and the original files are not in sync, the status column in the library changes from. Drawing tools help you create basic shapes within Adobe Captivate so that you don't have to create and import them from other applications. Adobe Captivate resets to the Select tool after an object is created on Stage. To draw the same type of object many times over multiple drawing mode, click the corresponding icon on the drawing toolbar while pressing the Control key on Windows or Cmd on Mac OS. Adobe Captivate does not have a separate transformation tool. You can resize any object after selecting it. Move the cursor over the corners of objects, and when the relevant cursor appears, resize the object to the required dimensions. This introduces an element of motion that is effective and eyecatching for users. Add existing animation files to a slide or use the animated text feature in Adobe Captivate. Source Click to edit the FLA file using Adobe Flash from with Adobe Captivate. Edit The transparency of the animation file. A high Alpha value results in a bright version of the animation file and Alpha a lower value in a dimmer animation. If you import an animation file containing text created with device fonts, the animation appears in Adobe Captivate, but the text will not. For animations that will be imported into Adobe Captivate, try to use embedded fonts for text. If the inserted file does not have metadata, use thirdparty software like FLVMDI to add metadata to the file. Adobe Captivate provides four levels of video quality, even though only the Low option is suggested for most uses. A slide video can be imported to multiple slides a video slide group. Adobe Captivate retains the grouping. You can insert the same video to another slide or a group of slides in the same project.
